|                                       | Meerut Institute of Engineering and Technology, Meerut |           |   |  |  |  |  |  |
|---------------------------------------|--|-----------|---|--|--|--|--|--|
| CO-wise Syllabus- Engineering Physics |  |           |   |  |  |  |  |  |
| 1                                     |  | Statement | Understand the concepts of quantum mechanics.   |  |  |  |  |  |
|                                       | CO-1   | Syllabus  | Quantum Mechanics Inadequacy of classical mechanics, Planck's theory of black body radiation(qualitative), Compton effect, de-Broglie concept of matter waves, Davisson and Germer Experiment, Phase velocity and group velocity, Time-dependent and time-independent Schrodinger wave equations, Physical interpretation of wave function, Particle in a one-Dimensional box.  |  |  |  |  |  |
| 2                                     | CO-2   | Statement | Derive the expression for EM-wave using Maxwells equations.   |  |  |  |  |  |
|                                       |  | Syllabus  | Electromagnetic Field Theory  Basic concept of Stoke's theorem and Divergence theorem, Basic laws of electricity and magnetism, Continuity equation for current density, Displacement current, Maxwell equations in integral and differential form, Maxwell equations in vacuum and in conducting medium, Poynting vector and Poynting theorem, Plane electromagnetic waves in vacuum and their transverse nature. Relation between electric and magnetic fields of an electromagnetic wave, Plane electromagnetic waves in conducting medium, Skin depth.  |  |  |  |  |  |
|                                       |  | Statement | Describe the different phenomena of light and its applications.   |  |  |  |  |  |
| 3                                     | CO-3   | Syllabus  | Wave Optics Coherent sources, Interference in uniform and wedge shaped thin films, Necessity of extended sources, Newton's Rings and its applications, Introduction to diffraction, Fraunhoffer diffraction at single slit and double slit, Absent spectra, Diffraction grating, Spectra with grating, Dispersive power, Resolving power, Rayleigh's criterion of resolution, Resolving power of grating.   |  |  |  |  |  |
|                                       | CO-4   | Statement | Understand the concepts and applications of fiber optics and LASER.   |  |  |  |  |  |
| 4                                     |  | Syllabus  | Fiber Optics & Laser Fibre Optics: Principle and construction of optical fiber, Acceptance angle, Numerical aperture, Acceptance cone, Step index and graded index fibers, Fiber optic communication principle, Attenuation, Dispersion, Application of fiber.  Laser: Absorption of radiation, Spontaneous and stimulated emission of radiation, Population inversion, Einstein's Coefficients, Principles of laser action, Solid state Laser (Ruby laser) and Gas Laser (He-Ne laser), Laser applications.  |  |  |  |  |  |
| 5                                     | CO-5   | Statement | Understand the properties and applications of superconducting materials and nano materials.   |  |  |  |  |  |
|                                       |  | Syllabus  | Superconductors and Nano-Materials Superconductors: Temperature dependence of resistivity in superconducting materials, Meissner effect, Temperature dependence of critical field, Persistent current, Type I and Type II superconductors, High temperature superconductors, Properties and Applications of Super-conductors.  Nano-Materials: Introduction and properties of nano materials, Basics concept of Quantum Dots, Quantum wires and Quantum well, Fabrication of nano materials -Top¬ Down approach (CVD) and Bottom-Up approach (Sol Gel), Properties and Application of nano materials. |  |  |  |  |  |

## B.Tech First Year: Regular Course Lecture Plan Session 2023-24

| Subject Name | Engineering Physics (BAS-101/BAS-201) |
|--------------|---------------------------------------|
|--------------|---------------------------------------|

| Unit No. | Unit Name             | Syllabus Topics  | Lecture No |
|----------|-----------------------|--|------------|
|          |                       | Inadequacy of classical mechanics, Planck's theory of black body radiation, Stefan's law, Wien's law, Rayleigh-Jeans law | 1          |
|          |                       | Compton Effect   | 2          |
|          |                       | de-Broglie concept of matter waves   | 3          |
|          |                       | Davisson and Germer Experiment   | 4          |
| 1        | Quantum Mechanics     | Phase velocity and group velocity  | 5          |
|          |                       | Physical interpretation of wave function, Time-dependent Schrodinger wave equations                                      | 6          |
|          |                       | Time-independent Schrodinger wave equation, Particle in a one-dimensional box  | 7          |
|          |                       | Numerical problems related to Wien's law, Stefan's law,<br>Compton effect  | 8          |
|          |                       | Numerical problems related to de-Broglie matter wave, wave function & one dimensional box                                | 9          |
|          |                       | Basic concept of Stoke's theorem and Divergence theorem,   | 10         |
|          |                       | Basic laws of electricity and magnetism  Continuity equation for current density, Displacement current                   | 11         |
|          |                       | Maxwell's Equations in differential & integral form  | 12         |
|          |                       | Maxwell's equations in vacuum and conducting medium  | 13         |
| 2        | Electromagnetic Field | Poynting vector and Poynting theorem   | 14         |
|          | Theory                | Plane electromagnetic wave in vacuum &transverse nature  | 15         |
|          |                       | Relation between electric and magnetic field, Plane electromagnetic waves in conducting medium, Skin depth               | 16         |
|          |                       | Numerical problems related to Maxwell's equation, Poynting vector, skin depth  | 17         |
|          |                       | Introduction about Interference, Coherent sources, Interference in uniform thin films                                    | 18         |
|          |                       | Wedge shaped films, Necessity of extended sources  | 19         |
|          |                       | Newton's rings and its application   | 20         |
|          | Wave Optics           | Numerical problems related to thin film, wedge shaped film and Newton's Ring   | 21         |
|          |                       | Introduction to diffraction, Fraunhoffer diffraction at single slit  | 22         |
| 3        |                       | Fraunhoffer diffraction at double slit   | 23         |
|          |                       | Diffraction grating, Absent spectra  | 24         |
|          |                       | Spectra with grating, Dispersive power, Resolving power  | 25         |
|          |                       | Rayleigh's criterion ofresolution, Resolving power of grating  | 26         |
|          |                       | Numerical problems related Single slit, Grating, Resolving power & dispersive power                                      | 27         |

## B.Tech First Year: Regular Course Lecture Plan Session 2023-24

| Subject Name | Engineering Physics (BAS-101/BAS-201) |
|--------------|---------------------------------------|
|--------------|---------------------------------------|

| Unit No. | Unit Name            | Syllabus Topics  | Lecture No |
|----------|----------------------|--|------------|
|          |                      | Principle and construction of optical fibre, Classification of Fibre   | 28         |
|          | Fibre Optics & Laser | Step index and graded index fibres,V Number, Fibre optic communication principle                                     | 29         |
|          |                      | Acceptance angle, Numerical aperture, Acceptance cone  | 30         |
|          |                      | Attenuation, Dispersion, Losses, Application of fibre.   | 31         |
| 4        |                      | Numerical problems related to acceptance angle, Numerical aperture, critical angle, V number, Attenuation            | 32         |
|          |                      | Absorption of radiation, Spontaneous and stimulated emission of radiation, Principle of laser action, Pumping        | 33         |
|          |                      | Metastable state, Population inversion, Einstein's Coefficients  | 34         |
|          |                      | Three and four level laser, Solid state Laser(Ruby laser)  | 35         |
|          |                      | Gas Laser (He-Ne laser), Laser applications & numerical  | 36         |
|          |                      | Superconductivity, Temperature dependence of resistivity in superconducting materials, critical magnnetic fdield,    | 37         |
|          |                      | Temperature dependence of critical field, Meissner effect,<br>Persistent current, Type I and Type II superconductors | 38         |
|          |                      | High temperature superconductors, Properties and applications of Super-conductors                                    | 39         |
|          | Superconductors and  | Numerical related to superconductor  | 40         |
| 5        | Nano-Materials       | Introduction and properties of nano materials, Nano science and nano technology                                      | 41         |
|          |                      | Basics concept of Quantum Dots, Quantum wires and Quantum well   | 42         |
|          |                      | Fabrication of nano materials-Top-Down approach (CVD) and Bottom-Up approach (Sol Gel)                               | 43         |
|          |                      | Properties and Application of nano materials.  | 44         |
